All returns are calculated as total returns with distributions reinvested whereas distribution return is calculated as unit price movement minus total return. Month Performance and Commentary

Markets partially recovered during April, as investor sentiment improved following signs of easing geopolitical tensions and resilient corporate earnings. The Multi-Asset Funds participated in this rebound, with the Balanced Fund returning 1.94% and the Growth Fund returning 2.80% on a total return basis. Longer-term performance remains robust, with the Balanced Fund returning 9.07% p.a. since inception and the Growth Fund returning 11.06% p.a. since inception**.

Global equity markets roared from their March lows, supported by stronger-than-expected earnings and continued optimism surrounding AI-related investment, return 9.59% on a total return basis in USD terms. The S&P 500 recovered to fresh highs during April returning 10.49%. Market leadership remained concentrated in large-cap technology stocks, particularly within semiconductor and software sectors.

Australian equities also lightly advanced over the period as inflation concerns eased and risk appetite improved. The S&P/ASX 200 recovered a portion of its earlier losses returning 2.18% on a total return basis in AUD terms, supported by strength in cyclical sectors and improving global market sentiment.

While geopolitical risks remained elevated, particularly surrounding developments in the Middle East and energy markets, investors became increasingly focused on underlying economic resilience and corporate profitability. Australian bond yields were broadly stable, while the Australian dollar traded within a relatively narrow range. Headline CPI came in at 4.2% for April down from 4.6% vs a trimmed mean of 3.4% up from 3.3% with the largest contributors being Housing (+6.3%), Transport (+6.6%) and Food and non-alcoholic beverages (+2.8%). We continue to monitor developments in global markets, inflation and monetary policy, with particular attention to the potential implications for asset valuations and portfolio positioning.
