- 1 Unaudited – in calculating the NTA, EAIT asset values have been calculated using unaudited absolute return fund performance estimates for the month being reported.
- 2 For the purposes of calculating the above figures, the Australian Equivalents to International Financial Reporting Standards (AEIFRS) have been applied (other than for classification of net assets attributable to unitholders of EAIT where Australian Generally Accepted Accounting Principles, as applied before the introduction of AEIFRS, have been used).
- 3 Following the announcement of the intention to separate EAIT into two funds, performance data from 1 June 2009 onwards represents the underlying absolute return funds only. Prior to 1 June 2009 the performance data reflects both the absolute return funds and direct investments.
- 4 The May 2007 monthly NTA performance was impacted by the EBI rights issue and placement which were completed that month and does not include the implied value of EBB shares received by investors who successfully participated in the EBI capital raising. The May 2007 performance of the underlying investment portfolio (excluding the effect of the capital raising) was +2.40%.

Market Commentary

Following a weak start to the year, equity markets quickly reversed course in February with the S&P 500 reaching a record high by month end. The S&P 500 Index and the MSCI World Index rallied 4.6% and 4.0% for the month, respectively. High yield also benefited from the risk-on atmosphere and responded to strong fund flows, with the Credit Suisse High Yield Index gaining 2.0% on the month.

Recent concerns surrounding emerging markets (i.e. slowing growth in China, currency depreciation in Turkey and Argentina, and protests in Ukraine, Thailand, and Venezuela) have not yet led to global contagion as markets increasingly view the troubles to be localised and not detracting from economic progress in the US and Europe. Corporate results and economic data continue to suggest improving fundamentals, though many market valuations seem to imply much larger and more certain improvement than rationale supports.

The S&P recently breached all-time highs (up a remarkable 180% from the crisis trough five years ago) along with strong European equity performance led by peripheral countries and banks. Corporate credit yields now reside at all-time lows of 3.1% for US investment-grade and 5.2% for US high-yield.

Performance Commentary

The Everest Alternative Investment Trust was up 1.2% for the month of January (net of all fees and expenses). The underlying portfolio was up 3.5% in USD terms, however the appreciation in the Australian dollar (from 0.876 to 0.893) deducted 1.9% to the total Fund performance. This compares to monthly returns for the S&P 500 Index of 2.6% (in AUD terms) and the S&P/ASX 200 Accumulation Index of 5.0%.

The Fund's largest exposure, long only equities manager ESL, had a positive month. ESL SPE I and ESL SPE II, which hold positions in Sears and Autonation, were up 20.6% and 6.1%, respectively. In aggregate, ESL contributed 5.0% from the total Fund return.

Our Multi Strategy managers also had a positive month with the Fund's second largest exposure, the TPG Axon Side Pocket, posting a 1.0% gain for the month.

Fund Update

There are no updates this month.
